Functional modules	Specifications Sub-items	Specifications
hardware	Furnace size	$\bar{y}200^{\circ}200^{\circ}250\text{mm}$ (Length*Width*Height) or $\bar{y}200^{\circ}250\text{mm}$ (diameter*height)
	Furnace opening method	Lifting
	Temperature controller	Standard configuration includes a digital controller, which can be set based on heating/cooling rate or time. The program has automatic temperature control and time control functions; the digital control system can... Precisely set and display temperature
	Flow meter	Equipped with a gas flow meter
	Sealing method	Soft material sealing (equipped with water cooling)
performance	Operating temperature	Long-term operating temperature $\bar{y}1700\bar{y}$ (no abnormalities observed after 2 hours of operation at 1700 $\bar{y}$ )
	Temperature control accuracy	$\bar{y}\pm1\bar{y}$
	heating rate	Adjustable from 1-10 $\bar{y}$ /min
	Temperature field uniformity	$\bar{y}\pm5\bar{y}$ (1300-1700 $\bar{y}$ , test report provided)
	Special gas types	Support nitrogen
	Furnace airtightness	Vacuum degree $\bar{y}-0.1\text{MPa}$ (measured at room temperature)
General Requirements	High temperature protection	The machine's outer surface temperature is <50 $\bar{y}$ at the highest operating temperature.
	Wire requirements	The power cable is a cable.
	Protection function	It has a protection function that automatically stops heating when the door is opened, and is protected against over-temperature, over-pressure, and short-circuit hazards. Leakage protection functions
	Process security system	Passwords can be set to protect process parameters.
