GWDL-XA Box-Type Electric Furnace Product Introduction and Technical Data		
one,	Product Name: Resistance Furnace / Box-type Electric Furnace / Muffle Furnace	Contact Person: Wang Guoqing, 13837908666, wgq@gwdl.com
two,	Model: GWDL-XA	Specifications: 1200, 1400, 1600, 1700, 1800, 1900 degrees
three,	Product Introduction	
The GWDL-XA series high-temperature furnace, as shown in the figure, integrates the control system and the furnace chamber. The furnace lining is made of vacuum-formed high-purity alumina lightweight material. This equipment utilizes high-temperature electric heating elements and is specifically designed for laboratories in universities, research institutes, and industrial enterprises for the sintering, melting, analysis, and production of ceramics, metallurgy, electronics, glass, chemicals, machinery, refractory materials, new material development, special materials, building materials, metals, non-metals, and other chemical materials. The control panel is equipped with an intelligent temperature regulator, power switch, main heating start/stop button, voltmeter, ammeter, computer interface, and observation/air inlet for continuous monitoring of the system's operating status. The product employs reliable integrated circuitry, ensuring a good working environment and strong anti-interference capabilities. The furnace shell temperature remains y45y at its highest, significantly improving the working environment. It features microcomputer program control, programmable curves, fully automatic heating/cooling, and the ability to modify temperature control parameters and programs during operation, offering flexibility and

Convenient and easy to operate.						
Four,	Technical parameters					
Maximum operating temperature: 1200 degrees Celsius	1400 degrees	1600 degrees	1700 degrees	1800 degrees	1900 degrees	1900 degrees
Operating temperature up to 1150 degrees Celsius	1350 degrees	1550 degrees	1680 degrees	1780 degrees	1850 degrees	1850 degrees
Temperature control range	100-120 0 degrees	100-1 400 degrees	100-160 0 degrees	100-170 0 degrees	100-1800 degrees	100-1900 degrees
Temperature control accuracy	±1 degree	±1 degree	±1 degree	±1 degree	±1 degree	±1 degree thermocouple
Temperature sensing element	k	S	B	B	B	+ optical fiber 1900 type
Heating element material	High-temperature alloy resistance wire	Silicon carbide rods and silicon molybdenum rods	Type 1800 silicon molybdenum rod	Type 1850 silicon molybdenum rod	Type 1850 silicon molybdenum rod	silicon molybdenum rod
Heating element installation location	with three-sided heating, plus bottom heating on both sides.	Top and bottom / sides	Both sides		Both sides	
heating rate	Maximum heating rate: 40 degrees Celsius per minute (non-linear)					
Furnace body structure and materials	The electric furnace body adopts an advanced air-cooled double-layer carbon steel furnace body structure. The effective air-cooled guide baffles enable the overall cold air circulation in the furnace shell, which finally cools the conductive plates of the heating element and then discharges them from the furnace body, avoiding high-temperature oxidation of the conductive plates of the heating element and ensuring a good working environment.					
Door opening method	The furnace door opens 180 degrees axially to the side. The door lock is located on the side and is equipped with a spring-loaded lock, ensuring effective locking. The lock's elasticity absorbs the expansion of the refractory material, allowing for free expansion and contraction during thermal changes and providing an effective seal.					
Refractory insulation materials	The furnace lining is made of vacuum-formed high-purity alumina lightweight material, which has high operating temperature, low heat storage, resistance to rapid heating and cooling, no cracking, no slag shedding, and good heat					
insulation performance. The furnace shell temperature is less than 45 degrees Celsius.						
Security Protection	It adopts an integrated modular control unit, which has accurate control precision, and is designed with dual-loop control and dual-loop protection, and has protection against overshoot, overshoot, undershoot, phase loss, overvoltage, overcurrent, overtemperature, current feedback, and soft start.					
Power off when door is opened	The furnace body is designed with a function that opens the furnace door and disconnects the main heating circuit when the temperature is high during operation, greatly protecting against the risk of electric shock when handling materials at high temperatures.					
Safe temperature control	Employing closed-loop technology with thyristor module trigger control, using phase-shift trigger control or zero-crossing triggering, the output voltage, current, or power is continuously adjustable, exhibiting constant voltage, constant current, or constant power characteristics. The current loop is the inner loop, and the voltage loop is the outer loop. When a sudden load is applied or the load current exceeds the current limit, the output current of the voltage regulator is limited to the rated current range, ensuring normal operation of the output and the voltage regulator. Simultaneously, the voltage loop also participates in regulation, limiting the output current of the voltage regulator to the rated current range, maintaining constant output current and voltage with sufficient adjustment margin. This protects the heating elements from excessive current and voltage surges, achieving safety.					

Luoyang Juxing Kiln Co., Ltd.

National high-tech enterprises and specialized and innovative enterprises

	Highly reliable control effect and control accuracy.
Temperature profile setting	Employs an intelligent temperature controller, equipped with standard PID, AI-controlled APID, or MPT, etc. This type of control features self-tuning and self-learning functions, providing excellent control with no overshoot or undershoot. Features include 30-segment programmable control, enabling temperature control with arbitrary slopes for both heating and cooling. It has programmable/operable commands such as jump (loop), run, pause, and stop, and allows... The program can be modified at any time during its controlled operation; artificial intelligence with curve fitting capabilities is employed. The algorithm can be adjusted to achieve a smooth and even curve control effect;
Number of segments in the heating curve	The 50-segment programmable control function allows for input settings: 50 segments for one curve, 28 segments for two curves. Segments/line, 15 segments/line for three curves, 9 segments/line for five curves; multiple curves can be entered simultaneously. It can be called arbitrarily when used.
The control panel has two buttons: a main power button/knob and a heating chamber on/off button/knob. Included accessories are a crucible tong, a pair of high-	
temperature gloves, and a furnace bottom pad.	
five,	Warranty coverage and period
The electric furnace comes with a one-year free warranty, including two heating elements. The furnace bottom plate and heating elements are not covered by the warranty (they are not covered by the warranty due to natural damage within three months). (Free replacement)	
VI. Packing List	
One electric furnace, one crucible tong, one pair of high-temperature gloves, one furnace bottom firing plate, one instruction manual, one certificate of conformity, and inspection. Please receive one copy of the factory inspection report and one sales delivery note. Notes	
seven,	
1. To avoid affecting the lifespan of the electric furnace, it is recommended that the maximum heating and cooling rates be 1-15y/min (at high temperatures). (Rapid heating will shorten the lifespan of the heating element)	
2. This box furnace does not use a vacuum sealing structure, so flammable and explosive gases must not be introduced.	
3. After a period of use, minor cracks may appear in the furnace chamber of this box-type furnace. This is normal and will not affect its use. It can also be repaired with an alumina coating.	
4. It is not recommended to introduce corrosive gases. If you need to introduce highly corrosive gases such as sulfur (S) or sodium (Na), please inform us in advance, and we will... Special treatment of the furnace	
5. High-temperature solution must not leak onto the furnace bottom. To prevent this, a pad or alumina powder can be used for isolation.	
6. The instrument should be placed in a well-ventilated, dry place. VIII. 1. The electric furnace	
is	Shipping Information
packaged in three layers: wrapped in foam paper, then wrapped in plastic film, and finally packed in a wooden crate.	
2. Free domestic door-to-door delivery (free delivery within city limits)	
3. We will be responsible for any damage that occurs during the transportation of the electric furnace.	
4. Logistics methods: Transportation by road, rail, ship (for foreign trade export), and air (for foreign trade export). For locations relatively close to our company... The company will arrange dedicated vehicles for transportation (packaging includes wooden pallets and cardboard boxes).

	Standard configuration includes 50 temperature rise profiles; imported instruments are optional (B).	Choose one of the two options	A/B
	Chinese menu, storage of multiple heating process curves, storage of historical curves and data reports (7-inch)	Choose one of the four options	C
Temperature controller touch screen IoT interface	The RS485 communication interface for the electric furnace can read and write real-time data such as furnace start-up, pause, stop, temperature rise curve, and allowable time.		D
Computer control software and hardware	The electric furnace can be controlled via computer for start-up, pause, stop, temperature curve setting, temperature curve reading, and parameter setting. It boasts high reliability and ease of use. It can store measured values, setpoints, output values, time intervals, interval numbers, temperature curves, and power percentage curves. Temperature curves, setpoints, and commonly used parameters can be modified via computer. Historical curves and reports can be filtered by time interval (1 second to 1 hour) and can be stored long-term. It uses a Siemens PLC for control (reading and writing electric furnace start-up, pause, stop, temperature curve, time, temperature curve, atmosphere,		E
PLC	flow rate, switch status, power supply, and power). Open ports allow for serial and parallel data exchange with upstream and downstream equipment.		F
observe	The observation port is located on the furnace door and is made of high-temperature resistant quartz glass.		H
